### TEXTILE EFFECT

#### Ceramic fiber

emana<sup>®</sup> by FULGAR  
SCIENCE GOES IN, BEAUTY COMES OUT.

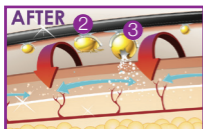

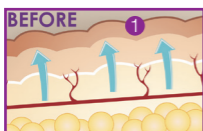

- Stimulates blood microcirculation and cellular metabolism (collagen production)

→ DRAINING, FIRMING

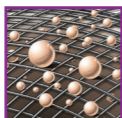

Everlasting effect

### ACTION MECHANISM

1. The human body evacuates energy produced by cells by heat and thermoregulation.
2. Wearing this innovative ceramic fiber also continuously transforms the body heat into infrared redirected to the skin surface which allows a better thermoregulation of the skin, an increase of collagen and the improvement of the skin aspect.
3. The subcutaneous temperature is imperceptibly increased which promotes the draining of the cells and the release of cosmetic ingredients contained in the microcapsules that we added to this fiber.

Time-release

As the ceramic textile rubs against the skin, the microcapsules are broken and gradually release the microencapsulated cosmetic ingredients.

Indications

- Liposuction
- Coolsculpting
- After any slimming or firming procedures
- Day to day firming action

The skin is firmer and moisturized,  
over 85% of tonicity gained\*
